KOFI REEVES-MILLER

Woodstock, GA | 470-786-2142 | kofireevesmiller@gmail.com | Portfolio | LinkedIn | GitHub

SUMMARY

Junior software engineer with hands-on experience building and deploying full-stack applications using C#, ASP.NET Core, React, TypeScript, Node.js, Java, and SQL. Experienced with REST APIs, relational and NoSQL databases, authentication, Docker, CI/CD, and cloud deployment. Currently expanding backend and data engineering skills through structured Python, PySpark, and SQL training.

TECHNICAL SKILLS

Languages: C#, Java, JavaScript, TypeScript, Python, SQL, HTML, CSS

Frameworks: ASP.NET Core Web API, Entity Framework Core, React, Node.js, Express, Flask, jMonkeyEngine, Tailwind CSS, MUI

Databases: SQL Server, MongoDB, SQLite

Cloud & DevOps: AWS, Docker, GitHub Actions, Render, Vercel, Gradle

Tools & Concepts: Git, GitHub, REST APIs, JWT, OAuth, WebSockets, Agile development, database design

PROJECTS

Recall Roster | GitHub | *C#, ASP.NET Core, EF Core, React, SQL Server, Twilio*

- Built a full-stack emergency recall platform that sends mass SMS notifications and tracks individual responses in real time.
- Designed REST API endpoints and a normalized SQL Server schema for contacts, rosters, recall events, and response records.
- Integrated Twilio webhooks to match inbound phone numbers, record replies, and update response status; collaborated in a three-engineer Git workflow.

Pro Tasker | Live Demo | *React, TypeScript, Node.js, Express, MongoDB, Docker*

- Developed and deployed a responsive project-management application with nested tasks, multiple views, and drag-and-drop organization.
- Created Express REST APIs and MongoDB models supporting CRUD workflows across users, projects, and tasks.
- Implemented JWT authentication, GitHub OAuth, automatic 401 session handling, Docker Compose, and GitHub Actions CI for frontend and backend checks.

iTunes Gallery | Live Demo | *React, TypeScript, Node.js, Express*

- Built a responsive media-search application backed by an Express proxy for the iTunes Search API.
- Created reusable audio and video player components with custom playback controls, persistent volume preferences, and mobile-friendly results.

DAdventure 3D | *Java 21, jMonkeyEngine, Gradle*

- Developing a modular 3D adventure-game prototype in Java using jMonkeyEngine, structured as a Gradle multi-project build with separate desktop and game modules.
- Implemented the initial scene, controllable 3D camera, floor/environment, test objects, and a lit dungeon-style atmosphere with a glowing light source.
- Integrated early Bullet physics via jme3-jbullet and laid the groundwork for a reusable world/room builder and entity system.

Transaction ETL Pipeline | *Python, pandas, SQLite, SQL*

- Built an ETL workflow that cleans transaction data, validates missing values and dates, and loads structured records into SQLite.
- Wrote analytical SQL queries using aggregation and window functions to evaluate monthly revenue trends and city performance.

EDUCATION & TRAINING

Technical Pre-Training — Python, PySpark, and SQL Aug 2026 - Present
Remote

Per Scholas — Full Stack MERN Software Engineering Feb 2026 - Jun 2026
Atlanta, GA

University of Georgia — B.S. Computer Systems Engineering Aug 2020 - May 2024
Athens, GA

CERTIFICATION

AWS Certified Cloud Practitioner — October 2024
